

Triple E all metal front panel handles feature a lifetime warranty against breaking

Injector / Ejector handles for CompactPCI, VME64x, VITA 41 and VITA 46.

Triple E offers the first all metal IEEE1101.10 handles, a significant improvement compared to conventional nylon handles. Extremely strong, Triple*Ease™ inject /eject aluminum handles are backed by a lifetime warranty against breakage. Unlike nylon handles, the solid metal design eliminates risk of out-gassing or burning in a harsh or extreme environment. A stainless steel leaf spring will not wear out like conventional nylon types.

With Triple E's patented all-metal extruded handles and our extensive in-house machining capability, the custom possibilities are virtually unlimited. Need a single handle to span multiple board widths and provide even insertion / extraction force?

Only Triple E handles are extruded and available in widths from 4HP to 12HP.

Let Triple E custom build a front panel using one of our all-metal handles that will meet your exact requirements.

Special care was given to the profile of our aluminum inject / eject handles to ensure conformance to the true U-height requirement even with the handle in the open position
